PROFILE

CSIT student currently working as a .NET Developer Intern with exposure to ASP.NET Core MVC and SQL-based backend development. Familiar with building structured web applications following MVC architecture and secure authentication practices. Seeking to grow as a backend developer in a professional software development environment.

EDUCATION

New Summit College , Bachelor's in Information Technology (CSIT) 01/2023 – Present | Kathmandu
Bachelor's in Information Technology (CSIT) program with a focus on software development, programming fundamentals, and web technologies. Gaining foundational knowledge in data structures, database systems, and application development through academic coursework and practical projects.

Kathmandu Model College, +2 09/2020 – 06/2022 | Kathmandu, Nepal
Completed higher secondary education in Science , gaining a strong academic foundation in science subjects and analytical thinking.

PROFESSIONAL EXPERIENCE

Logitect Company , .NET Developer Intern 12/2025 – 02/2026
Shankhamul, Kathmandu, Nepal

Contributing to the development of web applications using ASP.NET Core MVC and SQL Server. Supporting backend functionality through structured MVC architecture and database integration using Dapper. Gaining practical experience in authentication concepts, role-based access control, and collaborative development within a professional software environment.

SKILLS

Backend Technologies — C#, ASP.NET Core MVC, Dapper,php, **Frontend Technologies** — HTML, CSS, JavaScript, jQuery, **Database** — SQL Server, Stored Procedures, **Security Concepts** — Authentication, Password Hashing (SHA256), Role-based Authorization, **Development Tools** — Visual Studio, Git, GitHub, **Programming Languages** — Programming LanguagesC#, Python, C, C++

CERTIFICATES

Python Bootcamp
Python Users Group Nepal | 2023

TechTrix 2023
Organizer & Core Team Member

PROJECTS

Choto Job

Designed and developed an e-governance platform to connect local citizens with daily-wage workers for short-term tasks. The system supports structured user registration, verification, job posting, and application workflows to ensure transparency and reliability within the community.

Kala Ghar

Developed a web-based platform designed to connect handicraft teachers and learners. The project focused on providing a user-friendly interface and structured content sharing to support learning and promote traditional skills through digital means.

Sajilo Wear

Developed a full-stack web application enabling users to buy, sell, and rent traditional clothing through a digital marketplace. The platform includes user authentication, profile management, and listing dashboards, focusing on usability and smooth interaction between frontend and backend components.

Employee Service Booking System (Time Slot Based)

Developed a time-slot-based employee service booking system using ASP.NET Core and Dapper for efficient database interaction. Designed SQL Server stored procedures to handle employee management, service booking, and time-slot validation to prevent overlapping bookings. Implemented CRUD operations and structured the project using a clean layered architecture for better maintainability.

Billing Management System

Designed and implemented a billing management system to manage customers, products, and invoice generation. Used Dapper for database interaction and created SQL Server stored procedures for CRUD and billing operations. Implemented automatic total calculation logic and maintained structured project organization for better code readability.
